

Agenda:

- 1) preparation of Lund meeting discussions
- 2) Clarification of points suggested last time
- 3) ALBA pull request
- 4) AOB

1-2) We agreed to discuss in the developer time in Lund about the modifications of the web services suggested by Neil.
DLS has presented interest from people outside the domain of structural biology to use ispyb. This will require a discussion about naming and general structure of the database.
DLS will bring some more detailed user cases at the meeting, if available.

3) Daniel described the modifications included in the pull request from ALBA.
They involve mainly the handling of users inside their proposals, as they only have 1 users per proposals. The changes are specific to the site definition into the database entry.

4) No other points were discussed.

See you all in Lund :)
